## ABSTRACT:

A system for warning the sender of e-mail messages if the messages are not received is described. The system permits the sender of a message to designate whether the sender wishes to be warned in case the message is not opened by the recipient prior to a time and date specified by the sender. The sender's system maintains a database of such messages, and automatically monitors incoming messages and updates the database as responses are received from recipients of messages. If a response is not received from a recipient prior to the specified date, the system generates a warning message to the sender.

## PARENT-CASE:

REFERENCE TO CO-PENDING PATENT APPLICATION The present application claims priority from and fully incorporates herein, U.S. provisional patent application Ser. No. 60/063,164 entitled "FEATURES OF A MOBILE DEVICE AND ASSOCIATED COMPUTER", filed on Oct. 24, 1997, and Ser. No. 60/064,986, entitled "FEATURES OF A MOBILE DEVICE AND ASSOCIATED COMPUTER", filed on Nov. 7, 1997. Reference is also hereby made to the following co-pending U.S. patent applications: Ser. No. 08/944,948 filed on Oct. 2, 1997, entitled "OBJECT SYNCHRONIZATION BETWEEN OBJECT STORES ON DIFFERENT COMPUTERS", assigned to the same assigned as the present application. The referenced patent application is hereby fully incorporated by reference. Ser. No. 09/177,158 filed on even date herewith, entitled "SYSTEM AND METHOD FOR INTERACTION BETWEEN A DESKTOP COMPUTER AND MULTIPLE MOBILE DEVICE", which is assigned to same assignee as the present invention and hereby incorporated by reference.

## ABSTRACT:

A desktop computer and a mobile device both contain personal information management systems, such as electronic mail applications. Objects maintained by the electronic mail applications are synchronized between the desktop computer and the mobile device such that attachments to electronic mail messages are receivable by the mobile device. The present invention also allows the user of the mobile device to dynamically retrieve individual electronic mail message attachments on a per message basis. Further, filtering techniques can be implemented such that, during synchronization, only predetermined attachments are automatically provided to the electronic mail message object store on the mobile device.

## ABSTRACT:

A system and methods for rapid deployment of World Wide Web applications on the Internet. A preferred method provides a template, accessible to both client and server, for constructing Web source text. The source text includes HTML tag extensions for implementing dynamic Web environment. The tag extensions are nested and grouped to form scripts to perform specific tasks, such as state construction and on-line data arrangement. Each tag extension or script is expanded and replaced with data value to be embedded within a traditional HTML tag. A processor is employed to process templates and execute tag extensions therein, and produces pages in pure HTML form for displaying by any Web browser.
